Source: Tikehau Investment Management as of 30 September 2025. TDL I, vintage year 2010 and called Tikehau Special Situations II with €85m of committed capital, is not included in the above metrics given it is not representative of a predominately direct lending focused strategy. TDL I was the first commingled fund to include direct lending investments that reflect the strategy of the successor funds. The fund, launched in the aftermath of the 2008 financial crisis, also invested in leveraged loans and was therefore hybrid in nature. The fund has been fully realized. All projections, forecasts and estimates of returns and other "forward-looking" information not purely historical in nature are based on assumptions, which are unlikely to be consistent with, and may differ materially from, actual events or conditions. Such forward-looking information only illustrates hypothetical results under certain assumptions and does not reflect actual investment results and is not a guarantee of future results. Actual results will vary over time, and the variations may be material. Nothing herein should be construed as an investment recommendation or as legal, tax, investment or accounting advice.

"Gross IRR" represents the aggregate, compound, annualized internal rate of return calculated on the basis of cash flows to and from all investors, but disregarding carried interest, management fees, taxes and organizational expenses payable by investors, which will reduce returns and, in the aggregate, are expected to be substantial. Actual returns will be substantially lower on a net basis.

Calculations of Gross Return at the investment level use the date of the relevant investment without regard to whether the investment was initially funded by investor contributions or by borrowings under

a revolving credit facility to be subsequently repaid with investor contributions.

Calculations of Gross Return at the fund level use the scheduled date of contribution by fund investors to the fund for the relevant investments. For funds that borrow on a temporary basis prior to calling capital, if calculations of Gross Return at the fund level used the dates of each investment rather than the dates of each contribution by fund investors, the Gross Return may be lower since internal rate of return calculations are time-weighted and the relevant calculations would incorporate longer periods of time during which capital is deployed.

Past performance is not indicative of future results. Performance results referring to a period of less than twelve months are not a reliable indicator for future results due to the short track record. As a result of various risks and uncertainties, actual results may differ materially from those reflected in this Presentation.

Calculations of net return are equal to the internal rate of return after fees, carried interest and organizational expenses are factored in.

There is no guarantee any of the companies acquired will reach their IRR targets. There can be no assurance that investment objectives or investments made by Fund will be successful.

Targeted investments are based on generally prevailing industry conditions. Adverse economic, regulatory and market conditions could negatively impact our business assumptions.
